It gives a great facility of reference, and is a compact form for preserving such scraps of knowledge as we may gather in our way. We have used an English copy of the same Book for many years, and may be permitted perhaps, to say, that for ourselves, at least, it is quite as valuable a book as any we possess."—*Boston Medical and Surgical Journal*.

————— The Anatomy, Physiology, and Treatment of Cancer, with Additions by J. Mason Warren, M. D. 1 vol. 12mo.

"There have been no works extant, precisely satisfactory, on the management of cancer. A strange kind of mixing up of many things, without that exact order and critical analysis which are always necessary in a special guide to practice, is plainly discoverable in the essays and chapters interspersed through the books. That no great advances have been made in the treatment, for some centuries, is inferred from the fact that the mortality by it in all civilized countries, from whence statistics have been collected, has been uniform, and apparently unchecked.

In the midst of this state of things, a volume has been republished in Boston, by Messrs Ticknor & Co., that raises the expectations of the reader, to hope that a new system of exploration has finally led to a scientific course of medication in cancer; and that it may yet in some measure be brought under the control of remedies, like other disturbing causes of health. This work is not unknown in this country, by any means; but it has not been placed within the reach of all practitioners, till now. Its

author is Walter Hayle Walshe, M. D., of the London University. Essential additions are made to it by Dr. J. M. Warren, to the extent of about fifty pages. No one can properly appreciate the importance of the American editor's remarks, without following the text. It becomes apparent, in that way, that we have been provided with a desirable and valuable treatise on the subject.

The volume is divided into two parts. The first embraces the anatomy, physiology, pathology, and treatment. The second treats of cancer of particular parts—as the skin, cellular tissue, muscles, glands, bones, meninges, lips, tongue, tonsils, nares, sinuses, genital organs, ear, eye, &c. &c., illustrated by two lithographic and several wood engravings. We repeat, it is a desirable book to have. The price is only one dollar and fifty cents, and therefore within the means of all."

WORKS ON GEOLOGY AND MINERALOGY.

ALGER'S PHILLIPS'S MINERALOGY, &c. Just published, by **WILLIAM D. TICKNOR & Co.**, an Elementary Treatise on Mineralogy, comprising an Introduction to the Science, by William Phillips, 5th Edition, from the 4th London Edition, by Robert Allan; containing the Latest Discoveries in American and Foreign Mineralogy, with numerous Additions by Francis Alger, Member of the American Academy of Arts and Sciences, of the Boston Natural History Society, &c. 1 vol., comprising 600 Wood-cuts.

Phillips's Mineralogy has proved the most popular Treatise on the science ever published in Great Britain. Prof. Brande,

of the Royal Institution, London, thus speaks of it: "One of the most useful practical works on Mineralogy, and, in our language, at least, the most available for the use of the student, is Mr. Allan's edition of the *Elementary Treatise* by the late Mr. William Phillips." Its circulation in this country has also been very extensive. The present edition comprises three hundred more pages, and one hundred more figures of crystals, and about *one hundred and fifty more species, and important varieties*, than are contained in Allan's edition. Notwithstanding these additions, the price of the book is considerably less than Allan's, or any other recent treatise on the subject.

For the convenience of those who may wish to arrange their cabinets on a chemical system, several hundred extra copies of the Formulas have been struck off, and will be sold at the cost of printing. These can be conveniently cut apart and pasted upon the specimens.

We would add, that this work has been approved by Prof. Webster, and adopted by him as a text-book in Harvard College: the splendid Cabinet in that Institution having recently been re-arranged by him, in accordance with the same system.
